e^β	1.73	0.59			1.70	0.92	0.24			0.97
WORK			.197**	-.013				.102	.024	
std error			.089	.191				.130	.221	
e^β			1.22	0.99				1.11	1.02	
sample size	632	296	694	234	212	226	124	250	100	68
sample population	females who work	females who don't work	married women	unmarried women	women who are their hh's single worker	females who work	females who don't work	married women	unmarried women	women who are their hh's single worker

controlling for log of family income, family size, education, and race (see 3. Data)

A. regress spending on having a spouse, for women who work, control for if spouse works
B. regress spending on having a spouse, for women who don't work, control for if spouse works
C. regress spending on working, for women who are married, control for if spouse works
D. regress spending on working, for women who are not married
E. regress spending on having a spouse for single worker females

Results significant to the * = 90% confidence level, ** = 95% confidence level, *** = 99% confidence level

e^β represents the proportion of a single (unemployed) person's expenditure, in dollars, that the same person spends when married (working). (see 4. Methods & Results)
