

Figure by MIT OCW.

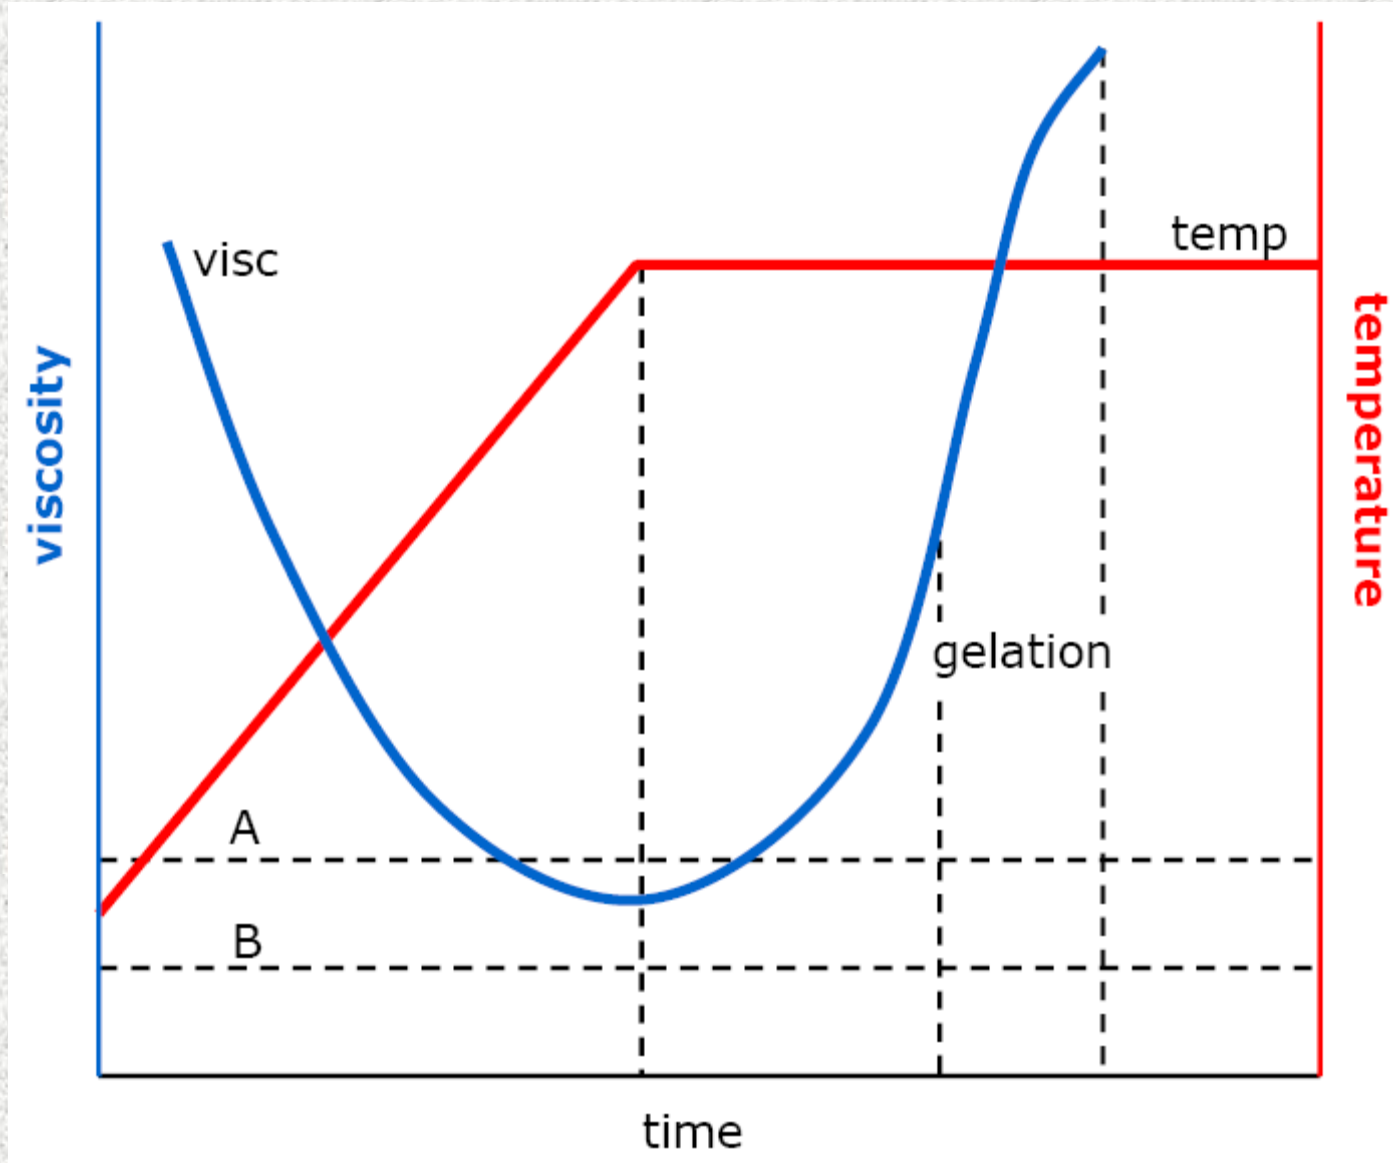

Figure by MIT OCW.

- Reaction kinetics

$$\frac{d\alpha}{dt} = k_0 \exp\left(\frac{-E^r}{R_g T}\right) \cdot \alpha^{m_1} (1-\alpha)^{m_2}$$

- Gelation

$$\alpha_{gel} = \frac{2}{f_{avg}}$$

- “DiBenedetto” equation: variation of  $T_g$  with conversion

$$T_g = \frac{(1-\alpha)T_{g0} + \lambda\alpha T_{g\infty}}{(1-\alpha) + \lambda\alpha}$$

- Quenching of reaction below  $T_g$

$$\ln k_0(T) = \ln k_0(T_g) + \frac{40.7(T - T_g)}{51.6 + (T - T_g)}$$
