

## **Paper Reading Questions**

For each paper, your assignment is two-fold. By 10PM the evening before lecture:

- Submit your answer for each lecture's paper question via the submission web site in a file named `lec $n$ .txt`, and
- Submit your own question about the paper (e.g., what you find most confusing about the paper or the paper's general context/problem) in a file named `sq $n$ .txt`. You cannot use the question below. To the extent possible, during lecture we will try to answer questions submitted the evening before.

## **Lecture 11**

What kinds of security vulnerabilities are still possible in an Ur/Web application? One approach might be to keep the OWASP Top-10 list in mind as you are reading the Ur/Web paper, and consider whether Ur/Web's features can eliminate certain classes of bugs, or whether it's still possible to have vulnerabilities.
