13) To high accuracy, and yet also. with a commendable economy of effort, find
(a) at least the volume and
(b) maybe also the gurFace area
of the pseudocube $x^{4}+y^{4}+z^{4}=1$, itself of course related closely to the
 thing from Problem 7.
(14) The shoddy table on the right contains fairly gross typographic errors in exactly two of its digits. Find and repair them!

| x | $\mathrm{f}(\mathrm{x}$ ) |  |
| :---: | :---: | :---: |
| 1 | 0.568 | 2921 |
| 2 | 555 | 9630 |
| 3 | 538 | 9725 |
| 4 | 520 | 1853 |
| 5 | 497 | 0941 |
| 6 | 470 | 8183 |
| 7 | 441 | 6014 |
| 8 | 409 | 7092 |
| 9 | 0.375 | 4275 |

(15) Calculate the mean distance between many pairs of points $P$ and $Q$ dropped at random and independently onto a circle of unit radius.
